Search For the Millenium Falcon:  
<https://swapi.dev/api/starships/?search=falcon>

## Part 2

- 1: the POST request accepts parameters of a body for the text of the new post
- 2: the GET request returns the data as JSON as a string
- 3: <https://practiceapi.devmountain.com/api/posts?id=555>
- 4: you could get a 200, which would work, and the post would show up. You could instead get a 409 code, which would mean that one of the fields is missing a required text property
- 5:  

```
https://practiceapi.devmountain.com/api/posts
{'
  "text": "Justin"
}'
```
- 6: <https://practiceapi.devmountain.com/api/posts?id=6906>  

```
{
  "text": "Justins favorite color is Royal Blue"
}'
```

7: <https://practiceapi.devmountain.com/api/posts/filter?text=blue>

8: the content-type is json, and the length is 238 characters

9: you either forgot to add the id number for the entry, or you forgot to add new text

10: I just get all the posts when I run a query
